**From Routledge : Population Mobility and Indigenous Peoples in Australasia and North America (Routledge Research in Population and Migration)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Population Mobility and Indigenous Peoples in Australasia and North America (Routledge Research in Population and Migration):

This book draws together relevant research findings to produce the first comprehensive overview of Indigenous peoples' mobility. Chapters draw from a range of disciplinary sources, and from a diversity of regions and nation-states. Within nations, mobility is the key determinant of local population change, with implications for service

delivery, needs assessment, and governance. Mobility also provides a key indicator of social and economic transformation. As such, it informs both social theory and policy debate. For much of the twentieth century conventional wisdom anticipated the steady convergence of socio-demographic trends, seeing this as an inevitable concomitant of the development process. However, the patterns and trends in population movement observed in this book suggest otherwise, and provide a forceful manifestation of changing race relations in these new world settings.

'[This is] an important and welcome addition to the academic literature regarding indigenous population mobility ... the strength of this book ... is that it marks a foundational gathering of data from which a number of exciting and progressive research agendas and theoretical frameworks can be drawn and developed.' - Progress in Human Geography

About the Author John Taylor is a Senior Fellow at the Australian National University's Centre for Aboriginal Economic Policy Research. For the past twenty years his research interests have focussed on the measurement of demographic and economic change among Indigenous Australians. Martin Bell is Senior Lecturer in Geography and Director of the Queensland Centre for Population Research at the University of Queensland. His major research interests focus on population mobility and internal migration, and on demographic forecasting and projection, especially at the local and regional level.
